# Security Awareness Training

Reduce risk exposure through internal users

Phishing is the most popular choice for hackers because it can be easily deployed. No matter how large or small a business is, it's a target for cybercriminals. That's because it only takes a single unwitting click on a phishing link to grant criminals access to everything on a given network and, in some cases, beyond. It's also why security awareness training and phishing simulations are essential for businesses that want to transform end users from the weakest link in the security chain into a truly resilient first line of cyber defense.

The best security in the world can't prevent an unwitting employee, working on-site or remotely, from accidentally leaving the front door to the network wide open. Security Awareness Training helps businesses empower end users to identify and report scams, avoid risks, fulfil regulatory compliance requirements and help prevent modern cyberattacks with regular training as part of the layered defense approach to become cyber resilient.

## Reducing Risk with Security Awareness Training

**Transform end users from the weakest link in the security chain into a truly resilient first line of cyber defense**

Keep up with evolving threats and new attack vectors

Security Awareness Training provides continuous, relevant and measurable education and testing that businesses need to help minimize risky user behaviors and achieve cyber resilience.

The full-featured phishing simulator to test employee

Well-trained users will reduce the number of security incidents a business will face, which, in turn, reduces the costs as well as losses in terms of productivity and business downtime.

## Key Benefits

- 20% less malware compared to customers with endpoint protection alone

- High relevancy and frequency of training videos featuring useful, interactive and effective content

- Monthly phishing campaigns including reports showing click results.
